CSP2-F >>> MCA4 Replacement with help of the Retrofit-Kit

- 5 steps to a new investment with state-of-the-art technology

- Quick and easy remodeling from CSP2-F3 to MCA4

- Time and cost savings thanks to adapter plate

- Simple parameterization of the protection device

- Improved error analysis (disturbance recorder)

General information

→ Due to the discontinuation of the System Line CSP series of protection and control devices, it is now necessary to replace them with current protection and control devices as required.

→ Woodward provides a Retrofit-Kit with which the devices of the System-Line can be exchanged for devices of the HighPROTEC with minimum effort. The existing control cabinet door can still be used. There is no need to saw a new door cutout. There is no need to drill a hole for fixing.

→ Where it is not possible to take over the function by simply setting the parameters, the logic modules of the HighPROTEC series offer further adaptation and parameterization options

→ The HighPROTEC devices offer more communication options, protection and monitoring functions at a significantly lower price.

The product instructions for the remodeling can be obtained directly from our sales department
