

PROTECTION MADE SIMPLE.

High **PROTEC**

POWER SYSTEM CONTROL AND PROTECTION

RELIABLE POWER SYSTEM PROTECTION

The HighPROTEC line from SEG Electronics GmbH offers an outstanding solution for reliable medium voltage protection of distribution, generator, substation and motor.

The innovative PC tool minimizes commissioning and training costs. The high degree of proven reliability guarantees high availability of your electrical grid and equipment. Each model type has the flexibility to handle the many variations that can be encountered in a specific application.

The "All Inclusive Concept" of HighPROTEC devices offers you a complete portfolio of protection functions, plus the operating and setting software Smart view and a tool for analyzing disturbance records, and all that without any hidden costs or extra fees.

CUSTOMER-ORIENTED, CERTIFIED TECHNOLOGIES

When developing the HighPROTEC Line we incorporated the latest standards and listened to our customers' input to deliver a product that offers long term availability to the market.

For example, the protection functions of all HighPROTEC relays have been adapted to comply with the requirements of the VDE-AR-N-4110/4120:2018.

With 50 years of experience, combined with the ability to leverage our existing product lines, the HighPROTEC product line offers precision, flexibility, reliability, and uncomplicated handling.

ALL INCLUSIVE - COMPETITIVELY PRICED

As standard, the devices are fully equipped with all functions required by the corresponding application. For example, the Feeder Protection Relay MRA4 provides functions such as Auto Reclosing, Vector Surge, df/dt (ROCOF) and six Frequency Protection Stages onboard, without extra charge.

- ▶ All current and ground current inputs are designed for 1 A and 5 A.
- ▶ All terminals can be easily removed and the current connectors are equipped with automatic short circuiters.
- ▶ The voltage inputs are designed for voltages up to 800 V ^{*5}, so that in many cases, there is no need for voltage transformers.
- ▶ The switching thresholds of the digital inputs can be adjusted via software.
- ▶ The wide range power supply unit covers all standard auxiliary voltages, both for AC and DC.
- ▶ The non-volatile disturbance recorder records up to 120 seconds with 32 samples per cycle.
- ▶ Comprehensive Cyber Security features.
- ▶ Page editor to design individual Control pages with breakers and measuring values.

*5 300 V for some devices / variants,
under UL max. 600 V

YOUR BENEFITS

- ▶ Simplified planning: You do not have to decide on the rated quantities.
- ▶ Facilitate your commissioning efforts: The wide functional range enables you to have fewer different relay types in stock, and helps to simplify your planning.
- ▶ We have made it much easier for your technical engineers: The convenient operating concept applies to all relay types and also for the parameter setting software "Smart view", which is available for free.
- ▶ Choice between multiple communications protocols, including Modbus, Profibus, DNP3.0, IEC 61850, IEC 60870-5-103 and IEC 60870-5-104 capabilities.
- ▶ Support for individual datapoint mappings with the Modbus, Profibus, IEC 60870-5-103 and IEC 60870-5-104 protocols.
- ▶ Comprehensive Cyber Security features.

POWER PROTECTION APPLICATIONS

Directional feeder protection	MCA4 / MRA4
Overcurrent and earth fault protection OC&EF protection	MRI4
Voltage and frequency protection	MRU4
Transformer differential protection with voltage measurement	MCDTV4
Transformer differential protection	MRDT4
Generator differential protection	MCDGV4
Line differential protection	MCDLV4
Motor protection	MRM4
Motor protection with voltage	MRMV4

MR = Protection // MC = Control and protection

OUR SERVICE

You will become entirely familiar with the HighPROTEC devices in virtually no time, we are convinced of this. But we do not want you to have the feeling it is only technology you are going to buy; you can be sure that you will be well supported by SEG Electronics GmbH. Our support team is available to assist you during sales process or in the after sales process. In addition, we offer special product training and service engineering.

CERTIFIED QUALITY

All our electronic devices are developed and tested according to current international standards such as the IEC 60255. Production of our products is subject to strict quality processes. This is proven by certification to ISO 9001.

Wind Turbine Applications

Photovoltaic Applications

Engine Generator Applications

Medium Voltage Applications

HighPROTEC OVERVIEW

Smart view

Our PC tool offers:

- ▶ Menu-controlled parameter settings incl. plausibility checks
- ▶ Offline configuration of all relay types
- ▶ Graphical visualization of tripping curves and direction determination settings
- ▶ Reading and evaluating of statistical data and measuring values
- ▶ Device status display
- ▶ Fault analysis with event, fault, trend and disturbance recorder
- ▶ Integrated fault simulator
- ▶ Create Single-lines with Page editor tool

Data Visualization

Fault analysis gets transparent and clear:

- ▶ Analysis and graphical representation of fault data
- ▶ Representation of digital and analog recordings with 32 samples per period
- ▶ Immediate evaluation of individual measurements
- ▶ Import and export of fault records in the ASCII and COMTRADE formats

SCADApter

Convenient graphical tool for individual configuration of these SCADA protocols:

- ▶ Modbus
- ▶ Profibus
- ▶ IEC 60870-5-103
- ▶ IEC 60870-5-104

Cyber Security

- ▶ Menu for the activation of security settings (e.g. hardening of interfaces)
- ▶ Encrypted TCP/IP connection between Smart view and protection relay
- ▶ Dedicated password for remote access
- ▶ Time penalties for multiple input of a false password
- ▶ Security logger, sending security related events to a centralized server (Syslog)

MCA4 | Directional Feeder Protection

The MCA4 is designed for the protection and control of mid-range voltage feeders. In addition to numerous protection functions for feeder protection and the utility connection point, the switch control can be fully monitored and controlled by the MCA4 by remote control or on location.

MRA4 | Directional Feeder Protection

The MRA4 is specifically tailored to the protection of incoming and outgoing feeders in MV systems and can be used for grid and generator protection.

MRI4 | Non-Directional Feeder Protection

The MRI4 is an overcurrent and earth fault relay. The relay is used for incoming and outgoing feeder applications and recloser can also be used as backup protection for differential protection systems.

MRU4 | Voltage & Frequency Protection

The MRU4 is designed to protect electrical equipment against dangerous voltage and frequency fluctuations, and is used for busbar, generator and feeder protection.

MRM4 | Motor Protection

The MRM4 is designed for the protection of motors. All the protection functions based on current, as well as monitoring functions such as motor start-up and incomplete start-up sequence for motor protection are available.

MCDTV4

Enhanced Transformer
Differential Protection

The MCDTV4 is a transformer protection device with phase and earth differential protection and with a large backup protection package. The device is specially designed to protect medium and large HV / MV / LV transformers in distribution and substation systems. The MCDTV4 is additionally equipped with grid coupling functions for Distributed Energy Resources, especially for generator power plants.

MRDT4

Non-Directional Transformer
Differential Protection

The MRDT4 is a transformer differential relay designed to protect two winding transformers. The relay can also be used as a generator differential protection and incorporates backup protection functions.

MCDGV4

Generator Differential Protection

The MCDGV4 is designed for the protection of medium and large generators. The step-up transformer can be integrated into the protection zone (unit protection). In addition to the differential protection package the device offers pole slip protection, phase distance (backup) protection and a broad interconnection package (FRT, QV, Reconnection Release) as well as full packages for phase, earth, voltage, frequency and power protection, and many more.

MCDLV4

Line Differential Protection

The cable / line differential protection relay MCDLV4 is designed to protect cables and lines up to 24 km. There can even be an in-zone transformer within the line to be protected. In addition, it comes with a very comprehensive protection package like phase, restricted earth fault, inrush detection, and monitoring functions including grid interconnection and control functionality up to 6 switchgears.

MRMV4

Motor Protection with
Voltage Measurement

Compared with the MRM4, the MRMV4 is a motor protection relay that also features voltage measurement and is therefore able to monitor power, voltage and frequency.

FEATURES OVERVIEW

		MCA4	MRA4	MRI4	MRU4	MCDTV4	MRDT4	MCDGV4	MCDLV4	MRM4	MRMV4
Protection Functions	IEEE C37.2
